Bracket K-K30-ZB Drawbridge-application

Technical Data

ARTICLE INFO

Chain actuators for smoke and heat extraction and controlled natural ventilation are known for their use at the main closing edge for bottom-hung, top-hung and side-hung sashes, whether opening inwards or outwards. The opening width is limited by the provided chain length.

With the new bracket set K-K30-ZB, the EA(230)-K-30 chain actuator can now also be mounted on the secondary closing edge.

With the so-called **"drawbridge" application**, higher opening angles can be achieved by mounting closer to the hinges. The accessory bracket is attached to the standard actuator and uses a deflection guide to ensure that the chain slides out at an angle. **This application is only possible for tilt sashes.**

Function:
- Additional bracket for chain actuator EA-K-30 for secondary closing edge application
- for chain actuator EA-K-30/XXXX
- Adapter bracket for sideways sliding of the chain at the chain outlet
